The global Submicron Boron Carbide (B4C) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Boron carbide, a compound of boron and carbon with the chemical formula B<sub>4</sub>C, is a grayish-black powder known for its exceptional hardness—second only to diamond on the modified Mohs scale—and excellent wear resistance. This material is notable for its chemical stability, being resistant to attack by both acids and alkalis. Due to its superior hardness and wear resistance, boron carbide is utilized in various applications requiring durability. It is commonly found in cutting tools, abrasives, cermets, mortars, and bulletproof materials. Its high electrical insulation and thermal conductivity make it suitable for use in high-temperature industrial environments, including in electronic components and hard disk heads. Additionally, its high neutron absorption capacity, thanks to the natural abundance of boron-10, allows its use in nuclear reactors for fission reaction control and neutron shielding. This report mainly focuses on submicron boron carbide (B4C) market.

United States market for Submicron Boron Carbide (B4C) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
