The global Subminiature Circular Connector market size is predicted to grow from US$ 517 million in 2025 to US$ 755 million in 2031; it is expected to grow at a CAGR of 6.5% from 2025 to 2031.

A subminiature circular connector is a type of connector used to connect coaxial RF cables or circuits in high-frequency applications. It is characterized by its small size, circular shape, and ability to withstand high frequencies and voltages.

Subminiature circular connectors are typically made of metal materials such as gold-plated brass or stainless steel, and have a threaded male or female end that screws into or onto the mating connector. They are commonly used in RF communication systems, such as microwave transmitters, receivers, and antennas, as well as high-speed data transmission applications.

Consumer electronic equipment: With the trend of thinner and smaller consumer electronic equipment, the demand for connectors is also increasing. For example, portable devices such as smartphones and tablets require connectors to ensure the proper operation of their internal circuits. It is expected that the demand for ultra-small circular connectors will further rise in the next few years, especially in terms of miniaturization and integration.

Automotive industry: The degree of electronics in automobiles is increasing day by day, and the demand for connectors has also increased significantly. In order to improve the safety and performance of automobiles, connectors need to meet higher reliability, high
