The global Subsea NDT Inspection Services market size is predicted to grow from US$ 231 million in 2025 to US$ 339 million in 2031; it is expected to grow at a CAGR of 6.6% from 2025 to 2031.

Submarine NDT testing services refer to a series of technical service activities that use various advanced technologies and means to inspect pipelines, platforms, equipment, etc. on the seabed without destroying the inspected objects or structures on the seabed, in order to obtain information such as their internal structure, performance, defects, and evaluate their integrity and safety. Submarine facilities such as pipelines and platforms are in a complex marine environment for a long time and are prone to defects such as corrosion and cracks. Nondestructive testing can detect these problems in a timely manner, avoid safety accidents such as leakage and collapse caused by structural damage, and ensure the safety of personnel and facilities. For production equipment, valves, etc. on the seabed, nondestructive testing can detect potential internal faults or damage, ensure their reliable performance, maintain the normal operation of production operations, and reduce economic losses caused by equipment failures. There are strict regulations and standards in the field of marine engineering, and nondestructive testing services can help operators meet relevant requirements and ensure compliance with project operations.
