Subsea Pile Guiding Frame is a structural device used in underwater construction to ensure the accurate alignment and installation of piles on the seabed. It typically consists of a rigid framework that supports and positions the pile, allowing for precise vertical and angular placement during driving or installation. Designed to withstand harsh underwater conditions, these frames are often equipped with mechanisms for stabilization and can be deployed using remotely operated vehicles (ROVs) or other marine equipment. The guiding frame enhances the efficiency and effectiveness of pile installation, critical for the stability of offshore structures.
