Subsea power cable plough is a specialized piece of equipment used in offshore and subsea installations for the burial and protection of underwater power cables. It is designed to create trenches in the seabed and then bury power cables at significant depths to protect them from damage, such as from fishing activities or natural environmental factors. The plough typically consists of cutting blades or ploughshares that cut into the seabed and a mechanism for guiding and burying the cables within the created trench. Subsea power cable ploughs are essential for the reliable and safe transmission of electrical power across long distances underwater, such as in offshore wind farms or intercontinental power cable connections.
