Subsea Unbonded flexible pipes are multi-layered structures with their typical cross-section composed by a combination of steel armoring layers (inner carcass, tensile and pressure armors) and polymeric conduits and tapes. An unbonded flexible pipe is one of the most important equipment in offshore engineering, transporting oil and gas between the floater on the sea and the well located on the seabed. Flexible pipes consist of several metallic helical-reinforced layers and internal and external polymer sheaths, and relative slip between the layers is allowed, so that the structure show high axial stiffness and radial stiffness.
