The global Suction Rolls market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Suction rolls, also known as vacuum rolls or vacuum suction rolls, are specialized components used in papermaking and other industries to aid in the removal of water or other liquids from the surface of a moving web or sheet. These rolls are crucial for the dewatering process in paper machines and serve to enhance productivity and improve paper quality.

The market prospects for suction rolls are positive, as the paper industry continues to evolve and improve its manufacturing processes. The demand for efficient water removal and dewatering equipment remains significant, as paper manufacturers strive for higher production rates, improved paper quality, and reduced energy consumption. Additionally, other industries that utilize similar dewatering processes, such as nonwovens and textiles, also create opportunities for the use of suction rolls.
