Sugar ester is a kind of non-ionic biological surfactant, which can be obtained by esterification of glucose and sucrose with fatty acids. Sugar esters can be divided into monoester, diester and triester due to different esterification degree. Sugar esters are mostly non - toxic, non - irritating, tasteless, but fatty acid esters below 12 carbon bitter taste. Because sugars have many hydroxyl groups, they are esterified and dissolved in water as a transparent solution. Sugar esters are widely used in food, medicine and cosmetics industries. In the traditional synthesis of sugar esters, there are some problems, such as easy coking of sugar, poor regional selectivity, organic solvent residue and enzyme inactivation.
