Sugar mill is a sugar refinery that processes the sugarcane to produce the raw sugar. Sugar Mill Machinery are the equipment that are utilized in sugar plants for various type of operations such as processing, refining, cane handling, grinding and packaging, among others. There are two types of sugar refineries back end refineries and front end refineries. In front end refineries, raw sugar is produced from sugarcane which is processed under various operations including cutting, shredding, milling or diffusion, crystallization, sugar drying and packaging. In back end refineries, raw or brown sugar is converted to refined sugar with as higher purity for local consumption, F&B companies and exporting and the wastage generated during the refining is used for heat generation in sugar mills.
