Sugarcane polyphenols are bioactive compounds found in sugarcane that exhibit antioxidant, anti-inflammatory, and antimicrobial properties. These polyphenols, which include phenolic acids, flavonoids, and lignins, are primarily concentrated in sugarcane's juice, leaves, and bagasse (fibrous residue). Sugarcane polyphenols have garnered attention for their potential health benefits, such as protecting against oxidative stress, supporting cardiovascular health, and reducing the risk of chronic diseases. In addition to health-related applications, these polyphenols are used in food preservation and cosmetics for their natural preservative and skin-protecting qualities. Increasingly, sugarcane polyphenols are being extracted and studied for use in dietary supplements and functional foods due to their strong antioxidant capacity.
