The global Sulfide Cathode Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Sulfide cathode materials, such as lithium sulfide (Li<sub>2</sub>S), iron sulfide (FeS), and cadmium sulfide (CdS), are critical components in lithium-ion batteries. Their development plays a key role in improving the specific capacity and cycle stability of batteries. Researchers are focusing on optimizing the electrochemical properties of these materials through structural design and doping regulation. Some sulfide cathode materials, like lithium sulfide, have already entered commercialization and are widely used in lithium-sulfur and lithium-sulfide compound batteries. However, challenges such as capacity fade and structural instability during cycling still need to be addressed to enable large-scale commercial applications.
