The global Sulfonyl Fluoride Leak Detector market size is predicted to grow from US\$ 172 million in 2025 to US\$ 298 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

The sulfonyl fluoride leak detector is a safety detection device used for real-time monitoring and early warning of sulfonyl fluoride (SO₂F₂) gas leaks in the environment. It primarily uses infrared, electrochemical, or photoacoustic spectroscopy sensing technologies to continuously measure the concentration of sulfonyl fluoride in the air. When the detected gas concentration exceeds a set safety threshold, the device can automatically trigger an audible and visual alarm or link with ventilation and safety systems to prevent personnel poisoning and operational risks. This type of instrument is widely used in grain depots and container fumigation, timber quarantine treatment, warehousing and logistics, and related industrial sites, and is an indispensable safety protection device in the use and management of sulfonyl fluoride. In 2024, sales reached 316,000 units, with an average price of US\$520 per unit. Total production capacity was 350,000 units. The gross profit margin was 41%.
