In 2024, global Sulfur Dioxide Tester production reached approximately 271.3 k units, with an average global market price of around US$ 2150 per unit. A Sulfur Dioxide Tester is a specialized analytical instrument designed for the accurate and rapid detection of sulfur dioxide content in gaseous, liquid, or solid samples. It operates on specific physical or chemical principles (such as electrochemical, optical, or chromatographic methods) to convert the concentration signal of SO? into a readable electrical signal, which is then displayed as a concentration value. It is widely used in environmental monitoring, food safety inspection, industrial process control, and other fields to ensure air quality safety, food safety, and compliance with process standards. The single line production capacity of sulfur dioxide analyzer is about 4000 units, and the industry gross profit margin is about 30-45%.
