A standard metal finishing method, sulfuric acid anodizing, is ideal for aluminum parts that require enhanced durability and abrasion resistance. There are various other benefits associated with sulfuric acid anodizing (Type II) that make it an attractive process for a variety of end-market products. Some of these attributes include its cost, which tends to be less expensive than other metal finishing technologies. The sulfuric anodize process also uses fewer resources and can apply coatings faster than other processes, which helps reduce manufacturing overall turn time. It can also have a cleaner and more streamlined waste treatment process making it more environmentally friendly. Additionally, sulfuric acid anodizing can produce dyed and undyed finishes and its clear and clean finish can enhance part aesthetics. And it can work with a greater range of metal alloys than most processes.
