Gross Profit Margin: 34%. A Sun Photometer is an optical instrument designed to measure the intensity of sunlight at specific wavelengths as it passes through the atmosphere. The sun photometer industry chain begins with upstream suppliers providing optical components, sensors, electronics, and materials such as lenses, photodiodes, and precision plastics or metals. Midstream manufacturers assemble these components into sun photometers, spectroradiometers, or light meters, incorporating calibration, software, and quality testing. Downstream, the products are distributed through scientific equipment distributors, research institutions, environmental agencies, universities, and e-commerce platforms, ultimately serving climate researchers, atmospheric scientists, and solar energy professionals. Sun photometers are indispensable tools for atmospheric and climate research, offering a cost-effective way to measure sunlight and aerosols with high precision.

United States market for Sun Photometers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
