The global Sunflower Dehuller market size is predicted to grow from US\$ 248 million in 2025 to US\$ 333 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Sunflower Dehuller is a mechanical device specifically designed to remove the hard outer hull of sunflower seeds, separating it from the kernel for subsequent food processing or oil extraction. The machine operates by applying centrifugal force, impact, or friction, exploiting the physical difference between the shell and the seed core to achieve clean and efficient dehulling. Depending on the processing method and application, sunflower dehullers can be categorized into impact-type, drum-type, or combination-type dehullers. These machines are commonly used in snack food production, oilseed preprocessing, nut processing, and animal feed manufacturing. The performance of a sunflower dehuller is evaluated based on key indicators such as dehulling efficiency, whole kernel rate, and breakage rate.

Sunflower dehullers are essential equipment in the preprocessing of sunflower seeds for both oil extraction and edible kernel production. With the global rise in vegetable oil consumption and increased demand for high-quality sunflower kernels in food and bakery industries, the market for sunflower dehulling machines is witnessing stable and sustainable growth. Key production regions such as Ukraine, Russia, Argentina, Turkey, India, and China drive equipment demand due to their large-scale oilseed processing industries. Sunflower dehullers help enhance oil yield, kernel recovery rate, and product purity by efficiently separating hulls from seeds prior to pressing or further processing.
