The global Sunflower Seed Dehuller market size is predicted to grow from US$ 182 million in 2025 to US$ 247 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

In 2024, global Sunflower Seed Dehuller production reached approximately 9905 units, with an average global market price of around K US$ 18 per unit. A sunflower seed dehuller is a specialized agricultural processing machine designed to separate the hard outer hull (shell) from the inner kernel of sunflower seeds. Its core working principle involves applying mechanical force—such as impact, shearing, or compression—to crack the sturdy shell of the seeds. Subsequently, an air aspiration or screening system utilizes the differences in density and size between the shell fragments and the kernels to separate them; the lighter shell fragments are removed, leaving the heavier kernels. This machine is a critical pre-treatment unit in the deep processing of sunflower seeds (e.g., for oil extraction, production of kernel snacks). Its dehulling efficiency and kernel integrity rate directly impact the final product yield and economic value. The single-line production capacity of Sunflower Seed Dehuller is approximately 450 units.

United States market for Sunflower Seed Dehuller is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
