A sunlight angle sensor is a device used to measure the angle of sunlight. Its purpose is to help the system accurately track the position of the sun so that the device (such as a photovoltaic panel or a sunlight collection lamp) can be adjusted to face the direction of the strongest sunlight and maximize energy absorption. The sensor usually determines the angle of the sun by measuring the radiation intensity of the sun and outputs the data to the control system to adjust the direction of the device to ensure efficient use of light energy. The sunlight angle sensor is generally suitable for outdoor environments and is connected to other devices via cables to achieve automatic adjustment functions.
