The global Super High Explosive Artillery market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Super High Explosive Artillery is an artillery shell with extremely high explosive power, designed to cause huge lethality and destruction on the battlefield. Super High Explosive Artillery is equipped with a large number of high-energy explosives. When the artillery shell hits the target, these explosives will quickly detonate and release huge energy, forming strong shock waves and fragments, causing a devastating blow to the target area.

With the continuous development of intelligent technology, Super High Explosive Artillery may have a higher level of intelligence in the future. Smart artillery shells can be precisely guided through advanced navigation and control systems to achieve precise strikes on targets. At the same time, smart artillery shells can also be adaptively adjusted according to actual battlefield conditions to improve the strike effect.
