The global Super-Junction MOSFET market size is predicted to grow from US$ 3468 million in 2025 to US$ 8954 million in 2032; it is expected to grow at a CAGR of 15.5% from 2026 to 2032.

In 2025, the global market sales volume of Super-Junction MOSFETs stood at approximately 2 billion units, with an average selling price of USD 1.75 per unit and an industry-wide average gross margin of around 35%.Super-Junction MOSFET is a high-voltage power MOSFET based on the super-junction charge balance principle. It adopts alternating P/N column drift regions to break the silicon resistance-voltage trade-off, featuring high breakdown voltage, low on-resistance, and excellent high-frequency performance. Covering 500V?1200V, it is widely used in high-efficiency power supplies, new energy, industrial and automotive power conversion systems.

As a mainstream solution for high-voltage power silicon devices, Super-Junction MOSFETs maintain steady demand across new energy, industrial power supplies, data centers and automotive electronics thanks to high efficiency and low loss. The industry is undergoing technology iteration and supply chain restructuring, with domestic substitution deepening and high-end & automotive-grade certification becoming key competitive focuses. Despite substitution pressure from wide-bandgap devices, Super-Junction MOSFETs hold an irreplaceable position in medium-to-high voltage power conversion thanks to mature processes and cost advantages. The market will evolve toward higher reliability, higher frequency and integration; industrial chain collaboration and process optimization will be the core of long-term development.
