The global Super Micro Pore Carbon Block market size is predicted to grow from US\$ 80.70 million in 2025 to US\$ 106 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

In 2025, global Super Micro Pore Carbon Block production reached approximately 20,144 Tons, with an average global market price of around 4,095 USD per Ton.

Super Micro Pore Carbon Block refers to carbon materials with specific geometric shapes that are made from anthracite, artificial graphite, and coal tar pitch as the main raw materials, with the addition of various additives, through batching, mixing, molding, calcination, and machining. These materials possess special properties such as low oxidation rate in blast furnaces, resistance to molten iron erosion, resistance to alkali corrosion, good thermal conductivity, and an average pore size of less than 0.1 μ m.

Super Micro Pore Carbon Block, with its extremely dense microporous structure, excellent resistance to molten iron penetration and alkali corrosion, and stable performance characterized by high thermal conductivity and low air permeability, precisely addresses industry pain points of traditional blast furnace refractories, such as susceptibility to slag and iron corrosion, short hearth and hearth life, high heat load, and significant operation and maintenance risks. It provides core material support for achieving long-term safe and stable operation of blast furnaces and reducing energy consumption and maintenance costs, serving as a key support for the long-life and high-efficiency transformation of modern blast furnaces. Driven by the high-end and green transformation of the steel industry and the 'dual carbon' policy, Super Micro Pore Carbon Block, as a core refractory material for the construction and renovation of large blast furnaces, continues to see steady and increasing demand, becoming an important

cornerstone supporting the high-quality development of high-temperature industries.

The raw materials for Super Micro Pore Carbon Block mainly include coke, anthracite, graphite, and bitumen. Typical suppliers include Shell, ExxonMobil, Sinopec, TotalEnergies, CNPC, Shenhua Energy, and Shanxi Coal Industry. Downstream applications are primarily in blast furnaces for ironmaking, with typical customers including Baowu Steel, Ansteel, ArcelorMittal, and Nippon Steel Corporation.

The single-line production capacity of Super Micro Pore Carbon Block varies significantly depending on the forming method, calcining furnace capacity, and machining efficiency, typically ranging from 5,000 to 10,000 tons per year. The industry gross profit margin is between 25% and 35%.

United States market for Super Micro Pore Carbon Block is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Super Micro Pore Carbon Block is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Super Micro Pore Carbon Block is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
