The global Superabsorbent Polymer (SAP) for Diapers market size is predicted to grow from US\$ 8066 million in 2025 to US\$ 12880 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Superabsorbent Polymer (SAP) for diapers is a highly absorbent material designed to capture and retain large volumes of liquid, significantly enhancing the diaper's dryness and comfort. SAP consists of cross-linked polymer networks that can absorb and lock in urine multiple times their own weight, preventing leakage and skin irritation. Its rapid absorption and moisture retention capabilities help maintain a dry surface, improving hygiene and reducing the risk of diaper rash. Due to its efficiency and cost-effectiveness, SAP has become an essential component in modern disposable diapers, contributing to their improved performance and user satisfaction.

The market for Superabsorbent Polymer (SAP) in diapers is driven by the growing global demand for hygiene and personal care products, especially in emerging economies with rising population and increasing disposable incomes. The shift towards disposable diapers due to convenience and improved lifestyle is accelerating SAP adoption. Additionally, advancements in SAP technology, offering higher absorbency, faster swelling, and better skin compatibility, are enhancing diaper performance and user comfort. Increasing awareness about infant care, aging populations requiring adult incontinence products, and stringent regulations on hygiene standards further boost the demand for high-quality SAP materials in the diaper industry.
