The global Supercapacitor Dry Electrode market size is predicted to grow from US\$ 209 million in 2025 to US\$ 422 million in 2032; it is expected to grow at a CAGR of 10.6% from 2026 to 2032.

In 2025, global sales volume of supercapacitor dry electrode is estimated at approximately 8.56 million square meters, with an average global market price of around USD 25 per square meter. The gross margin of major manufacturers is generally around 30%-45%.

Supercapacitor dry electrode is a core electrode component for supercapacitor manufactured through dry film-forming, calendaring, or current collector lamination processes. It is typically made from activated carbon, porous carbon material, conductive carbon material, and PTFE binder as the main raw materials, and is processed into electrode film, electrode sheet, or electrode roll through dry mixing, fibrillation, rolling, and lamination. Compared with conventional wet-coated electrode, dry electrode uses no or very limited organic solvent during manufacturing, reducing slurry preparation, coating drying, and solvent recovery steps. It features a shorter process flow, lower energy consumption, better environmental performance, and stronger capability for thick electrode fabrication.

Its upstream mainly includes activated carbon, porous carbon material, conductive carbon black, carbon nanotube, PTFE binder, aluminum foil current collector, electrode tab, and process equipment for rolling, lamination, and slitting. Its downstream applications mainly include electric double-layer supercapacitor, lithium-ion capacitor, and pseudocapacitive supercapacitor. This product directly affects the capacitance, internal resistance, rate performance, cycle life, and consistency of supercapacitor, and

is an important component for improving power density, energy density, and manufacturing efficiency. It is especially suitable for transportation, industrial equipment, power and energy, communication infrastructure, and small electronic device applications that require fast charge and discharge, long cycle life, and instantaneous power output.

United States market for Supercapacitor Dry Electrode is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
