The global Superconducting Magnetic Separator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Superconducting magnetic separators use superconducting materials as coils. When current is passed through the coil, a strong magnetic field can be generated in a larger separation space. The coil does not consume electricity and the magnetic field does not decay for a long time. Due to the high field strength, it can sort minerals with very weak magnetism and very fine particles, especially non-metallic minerals, and can also be used in sewage treatment and other fields.

United States market for Superconducting Magnetic Separator is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
