The global Supercritical Foamed PMMA market size is predicted to grow from US\$ 4.07 million in 2025 to US\$ 13.04 million in 2032; it is expected to grow at a CAGR of 18.2% from 2026 to 2032.

Supercritical Foamed PMMA refers to a cellular PMMA material whose pore structure is created with the assistance of a supercritical fluid, most commonly CO₂. Compared with solid PMMA, this material is intended to retain the key intrinsic properties of PMMA—such as optical clarity, surface hardness, weatherability, and dimensional stability—while introducing lower density and a controllable pore structure. In the PMMA system, the resulting morphology can range from fine-celled foam to microcellular and nanocellular structures, which is why this material is often discussed in the context of advanced lightweight and functional porous polymers.

From the upstream perspective, the core raw-material base of Supercritical Foamed PMMA is PMMA resin, while PMMA itself is derived from methyl methacrylate (MMA). Depending on product design, the material system may further involve different PMMA grades, block-copolymer modifiers, polymer-blend partners, and functional fillers or nucleating additives to regulate pore nucleation, cell size, density, and thermal or mechanical performance. From the downstream perspective, the most relevant application directions include thermal insulation materials and vacuum insulation panel (VIP) core materials, lightweight structural or core materials, filtration / separation / adsorption porous media, and biomedical porous scaffolds or drug-delivery platforms.

In 2025, global sales of Supercritical Foamed PMMA reached approximately 433 tons, with an average global market price of around US\$ 9,598/ton. Production capacity varies significantly among manufacturers, with gross profit margins ranging from

approximately 20% to 40%.

United States market for Supercritical Foamed PMMA is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Supercritical Foamed PMMA is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
