## Abstracts

According to this study, the global Supercritical Water Oxidation Technology market size will reach US\$ 891 million by 2031.

The Supercritical Water Oxidation Technology is an advanced oxidation technology based on the unique physicochemical properties of supercritical water. Under specific conditions of temperature and pressure, water enters the supercritical state, exhibiting characteristics of both gases and liquids, such as high diffusivity, low viscosity, and high solubility. This technology utilizes supercritical water as the reaction medium, enabling thorough mixing and rapid oxidation reactions between organic pollutants and oxidants, ultimately decomposing organic substances into harmless small molecules like carbon dioxide, water, and nitrogen gas for efficient and thorough treatment of organic waste.
