## Abstracts

The global Supermicroporous Carbon Block market size is predicted to grow from US\$ 165 million in 2025 to US\$ 212 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

Supermicroporous Carbon Block refers to carbon materials with specific geometric shapes that are made from anthracite, artificial graphite, and coal tar pitch as the main raw materials, with the addition of various additives, through batching, mixing, molding, calcination, and machining. These materials possess special properties such as low oxidation rate in blast furnaces, resistance to molten iron erosion, resistance to alkali corrosion, good thermal conductivity, and an average pore size of less than 0.1  $\mu\text{m}$ . The unit price of supermicroporous carbon blocks is typically around \$2,000 per ton, with industry gross margins usually between 15% and 25%.

Upstream, supermicroporous carbon blocks rely on a raw-material chain centered on anthracite and petroleum coke or other carbon sources, artificial graphite or graphitizable carbon, coal tar pitch as the primary binder, and selected additives that tune oxidation resistance, alkali resistance, and microstructure, supported by suppliers of refractories-grade aggregates, binders, and machining consumables. Manufacturing sits in the midstream and is capability-driven, involving crushing and classification, precise batching and intensive mixing, high-pressure forming, controlled calcination and sometimes impregnation-based densification, followed by machining to tight dimensions and quality control focused on pore structure uniformity and service reliability.

Downstream, products flow through refractory producers and furnace-lining integrators to end users mainly in blast furnace ironmaking, where carbon blocks are procured either directly by steelmakers or via relining contractors as part of a complete hearth and bottom lining package, with demand shaped by furnace relining cycles, hearth life-

extension strategies, and the availability of installation support and technical service during commissioning and campaign operation.

United States market for Supermicroporous Carbon Block is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Supermicroporous Carbon Block is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
