A Supply Chain Yard Management Solution (YMS) is a software-based platform designed to optimize the management and operations of logistics yards within supply chain networks. These solutions provide real-time visibility, tracking, and control of all activities within the yard, including the movement, staging, and storage of trailers, containers, and other assets. By automating and streamlining yard processes, such as check-in/check-out procedures, trailer and container assignments, dock door management, and yard inventory tracking, YMS enables organizations to improve operational efficiency, reduce turnaround times, minimize congestion, and enhance overall yard utilization. Additionally, YMS solutions often integrate with other supply chain management systems, such as warehouse management systems (WMS) and transportation management systems (TMS), to facilitate end-to-end visibility and coordination of goods movement from the yard to the warehouse or distribution center and vice versa. These solutions are used by logistics companies, distribution centers, manufacturing facilities, ports, and other organizations with complex yard operations to optimize their supply chain processes and improve customer service levels.

The global Supply Chain Yard Management Solution market size is projected to grow from US\$ 562 million in 2024 to US\$ 812 million in 2030; it is expected to grow at a CAGR of 6.3% from 2024 to 2030.
