The global Surface Grinding Deburring Machine market size is predicted to grow from US$ 318 million in 2025 to US$ 478 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

In 2024, global Surface Grinding Deburring Machine production reached approximately 36,945 units , with an average global market price of around US$ 8641 per unit. Gross margin is about 44%. The cost is 4,838 usd. Production capacity 40,000 to 42,000 units. A Surface Grinding Deburring Machine is an automated processing device that combines grinding, polishing, and deburring functions. It is used to finish the surfaces of metal, plastic, and composite materials to improve flatness, smoothness, and assembly accuracy. Its core system typically includes a grinding spindle, motor drive, a sanding belt or wheel assembly, a pressure control module, and an automatic feeding mechanism. Upstream suppliers primarily include abrasive (such as alumina, silicon carbide, and diamond abrasives), sanding belts, grinding wheels, motors, and control systems. Downstream applications are concentrated in industries such as automotive parts, aerospace, precision machining, electronic casings, medical devices, and mold manufacturing. This equipment significantly reduces the labor intensity and error rate of manual deburring through automation and digital control, improving production efficiency and surface consistency, making it an indispensable finishing equipment in modern manufacturing.
