The global Surface Mount Battery Management IC market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Surface Mount Power Management Integrated Circuit (SMPMIC) is an integrated circuit widely used in electronic equipment to manage and control power supply, power conversion, power management and power protection functions. SMPMIC is usually packaged in Surface Mount Technology (SMT) package, which allows integrated circuits to be directly soldered on the surface of electronic circuit boards without the need for traditional pin or pin socket connections. This packaging method has the advantages of small size, light weight, and automatic production, and is suitable for large-scale application in modern electronic equipment. SMPMIC usually contains multiple functional modules, such as power switch, voltage regulator, current limiter, power monitoring, power protection, battery management, etc., which are used to realize various functions of power management and power conversion. SMPMIC is widely used in various electronic devices, such as mobile devices (mobile phones, tablets), consumer electronics (TVs, audio, cameras, etc.), computer hardware (motherboards, graphics cards, routers, etc.), industrial control systems, communication equipment, medical Equipment, etc. SMPMIC plays a key role in electronic equipment. It can effectively manage and control power supply, provide stable voltage and current, and protect electronic equipment from adverse effects such as power failure, voltage fluctuation, and overcurrent, thereby ensuring the normal operation of electronic equipment. and stable performance.

The global market for semiconductor was estimated at US$ 579 billion in the year 2022, is projected to US$ 790 billion by 2029, growing at a CAGR of 6% during the forecast

period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
