Surface Mount DIP Switches are electronic components that are small DIP switches that can be mounted on the surface of a circuit board. A DIP switch is a dual in-line switch that is commonly used to select circuit options on a circuit board or to adjust circuit parameters.

The main features of Surface Mount DIP Switches are:

**Surface Mount:** They are designed to be soldered directly to the surface of a circuit board, eliminating the need for traditional sockets and connectors.

**Small size:** Due to their small size and compact design, they are often used in electronic devices that occupy limited space.

**Dual Column Arrangement:** Like traditional DIP switches, Surface Mount DIP Switches are arranged in dual columns, making it easy to select multiple options or adjust multiple parameters.

**Programmability:** They can be programmed to change state automatically under certain conditions, such as resetting to a default state when power is cut.

Surface Mount DIP Switches are widely used in electronic products, such as network equipment, communication equipment, security systems, industrial control, medical equipment, etc. Due to their surface-mounting advantages, they allow for more efficient use of space in modern compact equipment and can improve production efficiency and product quality.
