The global Surface Mounted Buzzer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Surface Mounted Buzzer, due to its ultra small and ultra-thin characteristics, and its square shape. Both piezoelectric buzzers and electromagnetic buzzers can be subdivided into patch buzzers, so their uses are the same as piezoelectric and electromagnetic buzzers, specifically used for various telephones, clocks, medical equipment, digital products, toys, office equipment, laptops, microwave ovens, air conditioners, home appliances, equipment control boards, etc. The sound principle of the patch buzzer is that the active buzzer contains a vibration source inside, so it will only sound when powered on. However, there is no vibration source inside the passive source, and external driving is required. Therefore, if a DC light signal cannot be used to sound legally, a square wave must be used to drive it. Active buzzers are often more expensive than passive ones due to multiple vibration circuits inside. Therefore, compared to active buzzers, passive buzzers have the following advantages: 1. They are inexpensive; 2. The sound frequency can be controlled, which may lead to the consequence of 'more than a few meters of noise'; 3. In a few exceptions, it may be possible to reuse a control port with LED. The great advantage of an active buzzer is that it is easy to master the program. This is also a prerequisite that passive buzzers do not possess. The principle of surface mount buzzer: Active buzzers rely on the principle of piezoelectric effect to produce sound. Piezoelectric materials, commonly seen are various piezoelectric ceramics. The special feature of this material is that when the voltage benefits the piezoelectric material, it will undergo mechanical deformation with changes in voltage and frequency. On the other hand, when vibrating piezoelectric ceramics, charges will be generated. That is to say, this material can convert mechanical deformation and charges into each other. The vibrating piece inside the

piezoelectric buzzer is a type of piezoelectric ceramic.
