Abstracts

The global Surface-mount(SMD) Attenuators market size is predicted to grow from US$ 362 million in 2025 to US$ 811 million in 2032; it is expected to grow at a CAGR of 12.4% from 2026 to 2032.

Surface-mount (SMD) attenuators are radio frequency devices directly soldered onto circuit boards, used to provide precise signal attenuation over a wide frequency range, ensuring circuit stability and meeting testing, adjustment, and protection requirements. They feature small size, high integration, good linearity, and strong consistency, widely applied in communication systems, radar, satellites, and testing equipment. With the development of high-frequency communications and millimeter-wave technology, market demand is growing steadily, though overall growth remains limited, placing it in a stable development segment. In 2024, the production of Surface-mount (SMD) attenuators was 2.2 million units, with an average price of 150 USD per unit. In 2024, a single production line had an annual capacity of about 1000 units, with an average gross margin of 40%. The industry chain of Surface-mount (SMD) attenuators includes upstream semiconductor materials, wafer fabrication, and RF circuit design; midstream activities of chip manufacturing, packaging, and testing; and downstream applications in both military and commercial sectors, with military uses in radar and satellite communications and commercial uses in base stations, mobile communications, and testing instruments, forming a complete application ecosystem.

United States market for Surface-mount(SMD) Attenuators is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Surface-mount(SMD) Attenuators is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
