The global Surgical Arm Boards market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The Surgical Arm Boards market is witnessing growth due to the increasing adoption of minimally invasive surgical procedures and rising cases of orthopedic and neurological disorders. The demand for surgical arm boards is expected to continue to rise due to the growing geriatric population, which is more prone to musculoskeletal disorders and requires surgical interventions. Additionally, advancements in surgical technologies drive the growth of the global surgical arm boards market. More and more hospitals are adopting robotic-assisted surgeries, which require specialized surgical arm boards. Moreover, the increasing number of ambulatory surgical centers and nursing homes worldwide contributes to market growth. The market is highly fragmented, with many regional and global players competing to expand their market share. However, the high cost of surgical arm boards and concerns regarding sterilization and maintenance of surgical instruments may hinder market growth in some regions. Overall, the Surgical Arm Boards market is expected to expand during the forecast period due to advancements in technology, increasing prevalence of chronic diseases, and growing demand for minimally invasive surgeries.
