Surgical Scalpel is a small and extremely sharp bladed instrument used for surgery, anatomical dissection, and various arts and crafts (called a hobby knife). Scalpels may be single-use disposable or re-usable. Re-usable scalpels can have permanently attached blades that can be sharpened or, more commonly, removable single-use blades. Disposable scalpels usually have a plastic handle with an extensible blade (like a utility knife) and are used once, then the entire instrument is discarded. Scalpel blades are usually individually packed in sterile pouches but are also offered non-sterile. Surgical scalpels consist of two parts, a blade and a handle. The handles are often reusable, with the blades being replaceable. In medical applications, each blade is only used once (even if just for a single, small cut).

Global surgical blades & scalpels key players include Aspen Surgical, Swann-Morton, Huaiyin Medica, etc. Global top 3 manufacturers hold a share about 60%. Asia-Pacific is the largest market, with a share about 33%, followed by Europe and North America. In terms of product, blade is the largest segment, with a share about 84%. And in terms of application, the largest application is hospital, followed by clinic.
