Medical Imaging devices are used to produce images of the internal aspect of the body. These devices are used to detect issues to the tissue level and help a lot in designing treatment and surgical procedures to be carried out in the future. A Surgical G-arm is a medical imaging device that is associated with x-ray technology. Surgical G-arm has a movable stand and x-ray source and detector for frontal and lateral view. The attached patient table has an extension facility and the stand can be fixed at a specific position during the surgical procedure for obtaining the image of both planes. With the feature to combine a pair of x-ray chains to obtain a view of both planes simultaneously, the demand for a Surgical G-arm is increasing. An increase in the number of people suffering from orthopedic issues and rising demand for advanced technology in Medical Imaging has resulted in the growth in the Global Surgical G-arm Market.
