Surgical Gloves are personal protection equipment (PPE) designed to protect clinicians in operating room (OR) environments. The primary purpose of surgical gloves is to act as a protective barrier for surgeons and nurses to prevent possible transmission of diseases or pathogens during procedures while working with surgical instruments.

Similar to medical examination glove, surgical glove standards are governed by the Food and Drug Administration (FDA) within the United States. However, the FDA requires manufacturers to meet a higher level of quality standards for surgical gloves. All surgical gloves are sterilized and package sealed in pairs for individual use. The sterilization of surgical gloves is standard as surgical procedures often involve open wound operation.

Today, surgical gloves are made from a variety of materials which include latex,

polyisoprene, neoprene, and nitrile.

Surgical Gloves are more difficult to produce because they need two molds instead of one, the fingertips need to be bent, sterilization is a bigger issue and thickness is higher.

The technical barriers of Surgical Gloves are relatively high than other types of gloves, resulting in higher level concentration degree. The manufacturing bases are mainly scatter at Southeast Asia, USA, Europe and China. SEA regions totally occupied about 53% Global Capacity. The key companies in Surgical Gloves market include: Ansell Healthcare Top Glove, Medline Industries, Cardinal Health and Molnlycke Health Care, etc.
