A surgical gown, also known as a surgical gown or gown, is a special garment worn by surgeons, nurses, and other staff involved in surgery during surgery. The main purpose of surgical gowns is to protect surgical personnel from contamination by patient body fluids, blood, tissues and other contaminants. It also prevents the surgical personnel's own microorganisms from contaminating the surgical area, thereby reducing the risk of surgical infection.

Surgical drape is used to cover the operating table and part of the patient's body to isolate the surgical area from the external environment and prevent contamination and infection during the operation. Surgical drapes are usually made of non-woven fabrics or other medical materials and have waterproof, anti-penetration, antibacterial and other properties.

The surgical drape is laid out on the operating table before surgery begins and covers the surgical area of the patient's body. It can effectively collect blood, body fluids and other contaminants generated during surgery to prevent these contaminants from contaminating the operating table and operating room environment. At the same time, the surgical drape can also provide a clear surgical area to help operators better observe and operate.

After the operation, the surgical drapes will be disposed of as medical waste to ensure the cleanliness and hygiene of the operating room.
