## Abstracts

The global Surgical Robot Servo Motor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Servo motors are mainly arranged in the kinematic joints of robots. In surgical robots, DC motors are mainly used, which has the advantage of higher power; the encoder is installed on the output shaft of the motor and rotates synchronously with the motor, and transmits the signal to the driver while rotating. ; The driver judges whether the steering, speed, and position of the servo motor are correct according to the signal, and then performs correction and adjustment, and sends out a corresponding control current according to the command.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
