Surgical items such as surgical sponges, equipment, or other instruments are sometimes accidentally left inside a patient during surgery. Surgical sponges, more than any other item, are most often retained and cause serious harm to patients. The Sponge Detection System is a device that identifies residual sponges in patients after emergency surgery and is used to reduce the risk of any surgical cotton-spun consumables (e.g. sponges, textiles and towels, collectively referred to as 'sponges') being left in the patient's body.

The global Surgical Sponge Counting Detection System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
