The global Surgical Sponge Counting System market size is predicted to grow from US\$ 254 million in 2025 to US\$ 388 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2025, global Surgical Sponge Counting System production reached approximately 8,500 units, with an average global market price of around 30,580 US\$/unit.

Surgical Sponge Counting System is an operating-room safety management system used to count, track, verify and document surgical sponges, gauze, laparotomy pads and towels before, during and after surgery, helping prevent retained surgical items. It can include manual sponge counting bags or boards, barcode/2D-code sponge verification systems, RFID-enabled sponge counting systems, and RF detection systems. Compared with traditional manual counting, it improves count accuracy, supports traceable surgical documentation, reduces human error, and enhances compliance with hospital surgical safety protocols.

Demand for Surgical Sponge Counting Systems is mainly driven by hospitals' increasing focus on surgical safety, prevention of retained surgical items, operating-room standardization, and medico-legal risk reduction. As surgical volume grows and operating rooms become more digitalized, hospitals are moving from simple manual counting toward barcode, RFID and RF-based assisted counting systems, especially in high-risk surgeries, large hospitals and developed healthcare markets. Business opportunities exist in electronic counting hardware, disposable tagged or coded sponges, integrated OR documentation software, and cost-effective manual counting products for emerging markets. In the future, suppliers with reliable detection accuracy, lower consumable cost, easy workflow integration and compatibility with hospital

information systems will have stronger competitiveness.
