A Surround View Camera Module (SVCM) is an automotive imaging system that uses multiple cameras around a vehicle to generate a 360-degree view, enhancing driver awareness and assisting in parking and maneuvering. In 2025, global Surround View Camera Module production reached approximately 12 M units, with an average global market price of around US\$ 200 per unit. Annual production capacity is 14 M units. Gross Profit Margin: 25.45%. The surround view camera module industry spans a complex chain from upstream component suppliers to downstream automotive OEMs. Upstream includes CMOS image sensors, lenses, image processors, and electronic housings, while midstream companies assemble the modules and integrate firmware and calibration tools. Downstream, these modules are incorporated into passenger cars, SUVs, commercial vehicles, EVs, and ADAS systems, with increasing penetration in autonomous driving platforms. Supply chain efficiency and component quality directly affect product reliability and adoption. Surround view camera modules represent a high-value growth segment in the automotive electronics market. As vehicles increasingly adopt ADAS and autonomous features, demand for multi-camera systems will rise, particularly in EVs and mid-to-high-end cars. For manufacturers, differentiation through image quality, AI-based object detection, and integration with vehicle infotainment systems will be critical. In addition, the rapid growth of Chinese suppliers is reshaping the global landscape, making cost-effective solutions widely accessible.
