## Abstracts

The global Survey Grade GNSS Receiver market size is predicted to grow from US\$ 947 million in 2025 to US\$ 1333 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

Survey grade GNSS receiver are professional devices used for engineering surveying, geospatial data acquisition, and high-accuracy positioning. They receive multi-constellation (GPS, BeiDou, GLONASS, Galileo) multi-frequency satellite signals and employ RTK and PPK techniques to achieve centimeter-level or higher accuracy. Surveying receivers typically include a base unit, high-precision antenna, communications module, and associated measurement software, forming a key instrument for roadway, bridge, tunnel layout, and topographic surveying workflows. In 2025, global survey grade GNSS receivers sales reached approximately 110 K Units, with an average price of 8,800 US\$/Unit.

The market for survey grade GNSS receivers is driven by demand for high-accuracy spatial data and precision positioning in surveying and engineering. Global infrastructure investment continues to fuel the need for precise geospatial data acquisition, as applications such as highway construction, urban underground utility mapping, and large-scale project layout require accurate measurement to ensure quality and schedule. Additionally, emerging use cases such as GIS, UAV remote sensing, and autonomous navigation stimulate upgrades of precision positioning equipment. The maturity of RTK/PPK techniques and broader availability of differential network services further enhance the reliability and efficiency of survey data, encouraging procurement by professional organizations.
