The Suspension Cell Culture Plate is an experimental device used for suspension cell culture. Its core design is based on the principle of suspending cells in liquid culture medium for growth and proliferation. It allows cells or cell aggregates to suspend freely by providing a suitable liquid environment without the need to attach to the surface of an artificial matrix. Compared with adherent culture, its advantages are fast cell proliferation, uniform culture environment, convenience for large-scale continuous culture, simple operation and low cost. It provides a convenient tool for large-scale cell production in the fields of biomedical research, drug development and cell therapy.
