Sustainable Air Domes are air-supported structures that integrate energy-efficient systems, low-carbon membrane materials, renewable energy solutions, and intelligent energy management technologies on the basis of conventional air dome designs. By adopting high-insulation membranes, optimized air supply systems, and optional photovoltaic or energy storage integration, these structures provide large-span, column-free spaces while significantly reducing operational energy consumption and carbon emissions, aligning with green building and sustainability standards.

Downstream, Sustainable Air Domes are primarily used in sports and recreational facilities (such as air-supported sports halls and ice rinks), industrial and storage spaces, public infrastructure, and green demonstration projects. End users include sports operators, industrial enterprises, government and public sector entities, as well as real estate and urban renewal project owners. As most projects are delivered on a customized, engineering-based basis, downstream customers place strong emphasis on life-cycle cost, operational energy consumption, and sustainability certifications, driving suppliers toward integrated solutions covering design, construction, and operation & maintenance.
