Abstracts

The global Sustainable Plastic Additives for Mechanical Recycling market size is predicted to grow from US\$ 3546 million in 2025 to US\$ 6582 million in 2032; it is expected to grow at a CAGR of 10.0% from 2026 to 2032.

Sustainable Plastic Additives for Mechanical Recycling refers to specialty functional additives and formulated additive packages used during plastic mechanical recycling, recompounding and subsequent conversion to restore, maintain or upgrade the performance of recycled polymers and enable greater use of post-consumer and post-industrial recycled materials. The research scope covers re-stabilization and antioxidant additives, compatibilizers and interfacial modifiers, chain extenders and rheology restorers, and additives for processing, odor and appearance improvement. Products may be supplied as active chemicals, formulated blends, pellets or concentrated masterbatches and are typically incorporated at dosage levels ranging from below 0.5 wt% for selected stabilization packages to several weight percent for certain performance modifiers and compatibilizers. Target polymers include recycled PE and PP, recycled PET and PBT, engineering plastics such as PA, PC and ABS, and mixed or multi-polymer waste streams. Their principal functions include limiting thermo-oxidative degradation, restoring molecular or melt properties, improving adhesion between incompatible polymers, reducing gels and odors, correcting color and improving processing stability, mechanical properties and durability. Major downstream uses include recycled flexible and rigid packaging, automotive and durable components, recycled fibers and thermoformed products, and recycled engineering-plastic compounds.

Key Findings

Re-stabilization compatibilization and performance restoration form the core functional technologies in Sustainable Plastic Additives for Mechanical Recycling

Polyolefin recycling additives show the broadest confirmed supplier coverage across PE and PP mechanical recycling applications

Packaging represents the most developed downstream application group with flexible films rigid containers and recycled PET products

EU PPWR generally applies from August 2026 and establishes future minimum recycled-content requirements for plastic packaging

Avient launched Cesa Tough A4R in May 2026 to improve ESCR and performance of recycled HDPE

Market Trends

The Sustainable Plastic Additives for Mechanical Recycling market is moving from single-function stabilization toward multifunctional additive systems designed to address several degradation mechanisms simultaneously. Recycled polymers frequently encounter thermal and oxidative degradation, molecular-weight loss, incompatible polymer contamination, gels, odor, discoloration and inconsistent mechanical performance, so suppliers are increasingly developing formulated packages rather than relying on one conventional antioxidant or processing aid. BASF's IrgaCycle portfolio uses tailored additive compositions for mechanical recycling, SI Group's EVERCYCLE platform combines application-specific stabilization packages for PE, PP and PET, and ADEKA's ADK CYCLOAID UPR series integrates antioxidants with functions such as nucleation or light stabilization. Another trend is the shift from preventing further degradation toward actively upgrading recycle performance. Compatibilizers, chain extenders, rheology modifiers and impact-performance additives increasingly enable recycled streams to enter higher-value applications that previously required greater virgin-resin content. Kraton's CirKular+ platform targets PCR performance enhancement and mixed-polymer compatibilization, while Avient continues to expand its A4R portfolio around recycle stabilization and mechanical-performance restoration.

Market Dynamics

Drivers

Growth in Sustainable Plastic Additives for Mechanical Recycling is being driven by higher recycled-content requirements, brand-owner circularity strategies and the need to maintain material performance as recycled polymers undergo repeated thermal and mechanical processing. Regulatory pressure is particularly visible in Europe: the Packaging and Packaging Waste Regulation entered into force on February 11, 2025 and generally applies from August 12, 2026, while Article 7 establishes minimum recycled-content requirements for several plastic-packaging categories from 2030. These requirements increase the commercial importance of additives that allow converters to incorporate more PCR without unacceptable losses in processing stability, mechanical properties, appearance or durability. BASF positions IrgaCycle specifically around enabling recycled plastics in higher-value applications, Avient's A4R technologies target recycled polyolefin stability and durability, and ADEKA's UPR series is designed to allow higher recycled-polyolefin content while retaining targeted performance.

Restraints

The principal restraint is the variability of recycled feedstock. Mechanical recycle quality depends on polymer origin, prior service history, contamination level, residual additives, pigments, fillers, moisture and the number of previous processing cycles, making additive performance less predictable than in virgin-resin formulations. A package optimized for recycled HDPE film may not provide equivalent results in rigid PP, PET or mixed engineering plastics, which increases formulation and application-development requirements. SI Group offers separate EVERCYCLE packages for LDPE, PP and PET, while ADEKA differentiates antioxidant, nucleating and light-stabilizing packages for recycled polyolefins, illustrating the need for application-specific chemistry. Another limitation is cost-performance balance. High-value compatibilizers or performance modifiers can enable difficult waste streams or higher PCR ratios, but converters must demonstrate that the improvement in recycle value, processing yield or virgin-resin displacement offsets additive cost. Food-contact compliance, recyclability recognition and potential accumulation of additives over repeated recycling loops also increase qualification requirements for packaging applications.

Opportunities

The largest opportunity is to move mechanically recycled plastics from lower-value downcycling applications toward higher-performance packaging, durable goods and engineering uses. Flexible packaging is particularly important because multilayer and

contaminated film streams are technically difficult to recycle. Dow's RETAIN compatibilizers improve dispersion of EVOH and nylon in polyolefin recycle streams, helping recovered barrier-film material regain processability and optical and mechanical performance. Mixed-polymer waste represents another opportunity because compatibilizers can reduce phase separation between otherwise incompatible polymer families; Kraton specifically targets mixed PCR streams and engineering-polymer combinations through its CirKular+ platform, while Arkema positions Lotader, Lotryl and Orevac chemistries for recycled mixed polymer blends. Additional opportunities are emerging in recycled-HDPE durability, rPET molecular-property restoration, odor removal, deinking and appearance correction. Avient's 2026 Cesa Tough A4R launch and Evonik's 2026 presentation of TEGO Cycle and TEGO Sorb solutions illustrate continuing product development around these more specialized recycling bottlenecks.

Challenges

The industry's long-term challenge is to improve recycle performance without creating new barriers to future recycling. Additives must deliver stabilization, compatibilization or mechanical-property improvement while remaining compatible with established sorting, reprocessing and recyclability requirements. Kraton's CirKular+ C2000 and C3000 products have received RecyClass and APR recognition in selected PE and PP applications, demonstrating the increasing importance of recyclability validation alongside immediate performance improvement. Another challenge is the widening diversity of waste streams. Mechanical recyclers process packaging films, rigid containers, automotive compounds and engineering-plastic waste with substantially different degradation profiles, so a universal additive solution is difficult to achieve. The industry must therefore balance product standardization with increasingly tailored formulations. Repeated recycling also creates cumulative thermal history and changing additive concentrations, meaning suppliers need to understand not only first-pass performance but also how formulations behave across multiple conversion and recycling loops. Avient explicitly positions Cesa Nox A4R around protection during initial and future recycling loops, reflecting this lifecycle requirement.

Industry Chain Analysis

The upstream industry chain includes antioxidant and phosphite chemistries, hindered amine light stabilizers, reactive functional polymers, grafted polyolefins, elastomeric modifiers, chain-extending agents, odor-control chemistries, processing aids, carriers and masterbatch raw materials. These inputs are formulated into single-function additives, one-pack stabilization systems, reactive compatibilizers, performance

modifiers or concentrated masterbatches. Higher-value products generally derive their differentiation from proprietary chemistry, synergistic formulation, low effective dosage, compatibility with recycled feedstock and application-validation expertise rather than from commodity raw-material content alone. ADEKA's one-pack UPR systems, SI Group's tailored EVERCYCLE packages and BASF's IrgaCycle compositions illustrate the increasing importance of formulated systems.

The midstream consists of additive producers, masterbatch manufacturers and compounders working with mechanical recyclers and converters to formulate recycled polymer streams. Additives may be introduced during washing, pelletizing, melt filtration, recompounding or final conversion depending on function. Downstream customers include recyclers, packaging-film and container manufacturers, automotive compounders, fiber and sheet producers and engineering-plastics converters. Value is created when additives raise usable recycled content, stabilize processing, restore performance or convert mixed and degraded waste into material suitable for higher-value products. This means technical service, formulation support and validation with actual recycle streams are important parts of supplier competitiveness alongside chemical manufacturing capability.

Segment Insights

By functional mechanism, re-stabilization and antioxidant additives represent one of the most established commercial groups because thermal and oxidative degradation occurs during repeated melt processing. BASF IrgaCycle, SI Group EVERCYCLE, Clariant AddWorks Circle, ADEKA ADK CYCLOAID and SONGWON SONGXTEND all provide stabilization-oriented solutions for recycled polymers. Compatibilizers and interfacial modifiers form another strategically important segment for mixed-polymer and multilayer waste streams, with technologies such as Kraton CirKular+, Dow RETAIN and Arkema's functional polyolefins improving dispersion and interfacial adhesion between otherwise incompatible polymers. Chain extenders and rheology restorers are particularly relevant where molecular degradation or viscosity loss limits reuse, while odor, color and processing additives address quality defects that restrict recycled material from consumer-facing applications.

Recommended addition level creates a meaningful technical and value distinction. Some stabilization packages operate at sub-0.5 wt% dosage: ADEKA reports examples at 0.2 wt% and 0.4 wt% for UPR-001 and UPR-011 in recycled PP formulations. Performance modifiers and compatibilizers may require higher loading depending on the defect being addressed; Avient's 2026 recycled-HDPE cable case uses Cesa Tough

A4R at 3–5%, while Kraton's recyclability testing has evaluated CirKular+ at multi-percent loading in PP applications. By target polymer, PE and PP represent the broadest commercial coverage among confirmed suppliers, followed by PET/polyesters, while engineering plastics and mixed-polymer streams generally require more application-specific compatibilization and performance-modification chemistry.

Downstream Market Opportunities

Packaging is the most developed downstream opportunity for Sustainable Plastic Additives for Mechanical Recycling because flexible films, bottles, caps, containers and recycled PET products combine high material volumes with increasingly demanding recycled-content and recyclability requirements. BASF specifically targets packaging through IrgaCycle, Dow RETAIN addresses multilayer barrier-film recycling, SI Group offers dedicated LDPE, PP and food-grade PET recycling packages, and Avient provides technologies for both recycled polyolefins and rPET. Automotive and durable-goods applications provide a second high-value opportunity because long-term heat stability, impact performance and appearance must be maintained despite recycled content; SONGWON's SONGXTEND 2721 targets recycled PP automotive parts and ADEKA explicitly identifies automotive interior and exterior components as applications for its UPR platform. Engineering plastics, fibers, sheets and thermoformed products offer additional growth potential where additives can recover molecular, rheological or interfacial properties that otherwise limit closed-loop or higher-value reuse.

Regional Insights

Europe is a particularly important regulatory and technology-development center for Sustainable Plastic Additives for Mechanical Recycling. The PPWR entered into force in 2025 and generally applies from August 2026, while its recyclability and future recycled-content provisions increase pressure on packaging producers to use recycled plastics without compromising technical performance. Europe also hosts a dense group of established additive suppliers including BASF, Evonik, Clariant, BYK, Arkema, Sukano and The Compound Company, creating strong technical coverage across stabilization, compatibilization and recycling-process improvement. North America is another major innovation and commercial center through Avient, SI Group, Milliken, Kraton, Dow, Ampacet and Cargill, with strong exposure to packaging, PCR performance enhancement and mixed-material recycling.

Asia is increasingly important both as a plastics-processing region and as a source of recycling-additive technology. Japan's ADEKA continues to promote ADK CYCLOID

UPR as a dedicated mechanical-recycling additive package and presented the range at CHINAPLAS and other Asian plastics events in 2026. South Korea's SONGWON maintains dedicated recycled-PP stabilization technology, while China's ?????????????? introduced U-pack B8633 to address gel formation in recycled-PE blown film and highlighted the solution at K 2025. Regional competition is therefore broadening from conventional antioxidant supply toward highly targeted recycle-performance packages supported by local compounding, recycling and application-development capabilities.

Competitive Landscape Analysis

The Sustainable Plastic Additives for Mechanical Recycling market is characterized by a combination of global polymer-additive leaders and specialist suppliers focused on compatibilization, masterbatch and recycle upgrade. BASF has built a dedicated mechanical-recycling platform around IrgaCycle, while Avient combines stabilization, compatibilization, chain-extension and PCR-performance solutions across its A4R and ColorMatrix portfolios. SI Group's EVERCYCLE, Clariant's Circle portfolio, ADEKA's ADK CYCLOID and SONGWON's SONGXTEND represent strong stabilization-oriented positions, while Kraton CirKular+, Dow RETAIN, Arkema functional polyolefins and The Compound Company focus more heavily on compatibilization and molecular or interfacial performance restoration. Evonik, BYK, Milliken, Ampacet, Sukano, Tosaf and Cargill broaden competition through processing, odor, appearance and application-specific additive functionality. Recent product activity indicates continued innovation: Avient introduced Cesa Tough A4R for recycled HDPE in May 2026, Evonik presented TEGO Cycle and TEGO Sorb mechanical-recycling solutions at CHINAPLAS 2026, and ?????????????? highlighted U-pack B8633 for recycled-PE film at K 2025. As recycled-content requirements rise, competitive advantage is increasingly determined by the ability to solve specific recycle defects at commercially acceptable dosage, demonstrate compatibility with established recycling systems and support converters with application-specific formulation and validation.

Report Scope

LPI (LP Information)' newest research report, the "Sustainable Plastic Additives for Mechanical Recycling Industry Forecast" looks at past sales and reviews total world Sustainable Plastic Additives for Mechanical Recycling sales in 2025, providing a comprehensive analysis by region and market sector of projected Sustainable Plastic Additives for Mechanical Recycling sales for 2026 through 2032. With Sustainable Plastic Additives for Mechanical Recycling sales broken down by region, market sector

and sub-sector, this report provides a detailed analysis in US\$ millions of the world Sustainable Plastic Additives for Mechanical Recycling industry.

This Insight Report provides a comprehensive analysis of the global Sustainable Plastic Additives for Mechanical Recycling landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyses the strategies of leading global companies with a focus on Sustainable Plastic Additives for Mechanical Recycling portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Sustainable Plastic Additives for Mechanical Recycling market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Sustainable Plastic Additives for Mechanical Recycling and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Sustainable Plastic Additives for Mechanical Recycling.

This report presents a comprehensive overview, market shares, and growth opportunities of Sustainable Plastic Additives for Mechanical Recycling market by product type, application, key players and key regions and countries.

Market Segmentation

Segmentation by Type:

Re-Stabilization and Antioxidant Additives

Compatibilizers and Interfacial Modifiers

Chain Extenders and Rheology Restorers

Processing, Odor and Appearance Improvement Additives

Others

Segmentation by Functional Mechanism Types:

Polyolefin Recycling Additives (PE and PP)

Polyester Recycling Additives (PET and PBT)

Engineering Plastics Recycling Additives (PA, PC, ABS and Related Polymers)

Others

Segmentation by Target Recycled Polymer Types:

Low Dosage (<0.5 wt%)

Medium Dosage (0.5–2.0 wt%)

High Dosage (>2.0 wt%)

Segmentation by Application:

Recycled Flexible Packaging

Recycled Rigid Packaging and Consumer Products

Recycled Automotive and Durable Components

Recycled Engineering Plastics Components

Others

This report also splits the market by region:

Americas

United States

Canada

Mexico

Brazil

APAC

China

Japan

Korea

Southeast Asia

India

Australia

Europe

Germany

France

UK

Italy

Russia

Middle East & Africa

Egypt

South Africa

Israel

Turkey

GCC Countries

The below companies that are profiled have been selected based on inputs gathered from primary experts and analyzing the company's coverage, product portfolio, its market penetration.

BASF SE

Avient Corporation

Evonik Industries AG

SI Group, Inc.

SONGWON Industrial Co., Ltd.

Clariant International Ltd

Milliken & Company

Kraton Corporation

Dow Inc.

ADEKA CORPORATION

BYK-Chemie GmbH

Ampacet Corporation

Arkema

Sukano AG

Tosaf Compounds Ltd.

Rianlon Corporation

The Compound Company B.V.

Cargill, Incorporated

Contents

1 SCOPE OF THE REPORT

- 1.1 Market Introduction
- 1.2 Years Considered
- 1.3 Research Objectives
- 1.4 Market Research Methodology
- 1.5 Research Process and Data Source
- 1.6 Economic Indicators
- 1.7 Currency Considered
- 1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

2.1 World Market Overview

- 2.1.1 Global Sustainable Plastic Additives for Mechanical Recycling Market Size (2021-2032)
- 2.1.2 Sustainable Plastic Additives for Mechanical Recycling Market Size CAGR by Region (2021 VS 2025 VS 2032)
- 2.1.3 World Current & Future Analysis for Sustainable Plastic Additives for Mechanical Recycling by Country/Region (2021, 2025 & 2032)

2.2 Sustainable Plastic Additives for Mechanical Recycling Segment by Type

- 2.2.1 Re-Stabilization and Antioxidant Additives
- 2.2.2 Compatibilizers and Interfacial Modifiers
- 2.2.3 Chain Extenders and Rheology Restorers
- 2.2.4 Processing, Odor and Appearance Improvement Additives
- 2.2.5 Others
- 2.2.6 Sustainable Plastic Additives for Mechanical Recycling Market Size by Type
 - 2.2.6.1 Sustainable Plastic Additives for Mechanical Recycling Market Size CAGR by Type (2021 VS 2025 VS 2032)
 - 2.2.6.2 Global Sustainable Plastic Additives for Mechanical Recycling Market Size Market Share by Type (2021-2026)

2.3 Sustainable Plastic Additives for Mechanical Recycling Segment by Functional Mechanism Types

- 2.3.1 Polyolefin Recycling Additives (PE and PP)
- 2.3.2 Polyester Recycling Additives (PET and PBT)
- 2.3.3 Engineering Plastics Recycling Additives (PA, PC, ABS and Related Polymers)
- 2.3.4 Others

2.3.5 Sustainable Plastic Additives for Mechanical Recycling Market Size by Functional Mechanism Types

2.3.5.1 Sustainable Plastic Additives for Mechanical Recycling Market Size CAGR by Functional Mechanism Types (2021 VS 2025 VS 2032)

2.3.5.2 Global Sustainable Plastic Additives for Mechanical Recycling Market Size Market Share by Functional Mechanism Types (2021-2026)

2.4 Sustainable Plastic Additives for Mechanical Recycling Segment by Target Recycled Polymer Types

2.4.1 Low Dosage (<0.5 wt%)

2.4.2 Medium Dosage (0.5–2.0 wt%)

2.4.3 High Dosage (>2.0 wt%)

2.4.4 Sustainable Plastic Additives for Mechanical Recycling Market Size by Target Recycled Polymer Types

2.4.4.1 Sustainable Plastic Additives for Mechanical Recycling Market Size CAGR by Target Recycled Polymer Types (2021 VS 2025 VS 2032)

2.4.4.2 Global Sustainable Plastic Additives for Mechanical Recycling Market Size Market Share by Target Recycled Polymer Types (2021-2026)

2.5 Sustainable Plastic Additives for Mechanical Recycling Segment by Application

2.5.1 Recycled Flexible Packaging

2.5.2 Recycled Rigid Packaging and Consumer Products

2.5.3 Recycled Automotive and Durable Components

2.5.4 Recycled Engineering Plastics Components

2.5.5 Others

2.5.6 Sustainable Plastic Additives for Mechanical Recycling Market Size by Application

2.5.6.1 Sustainable Plastic Additives for Mechanical Recycling Market Size CAGR by Application (2021 VS 2025 VS 2032)

2.5.6.2 Global Sustainable Plastic Additives for Mechanical Recycling Market Size Market Share by Application (2021-2026)

3 SUSTAINABLE PLASTIC ADDITIVES FOR MECHANICAL RECYCLING MARKET SIZE BY PLAYER

3.1 Sustainable Plastic Additives for Mechanical Recycling Market Size Market Share by Player

3.1.1 Global Sustainable Plastic Additives for Mechanical Recycling Revenue by Player (2021-2026)

3.1.2 Global Sustainable Plastic Additives for Mechanical Recycling Revenue Market Share by Player (2021-2026)

3.2 Global Sustainable Plastic Additives for Mechanical Recycling Key Players Head office and Products Offered

3.3 Market Concentration Rate Analysis

3.3.1 Competition Landscape Analysis

3.3.2 Concentration Ratio (CR3, CR5 and CR10) & (2024-2026)

3.4 New Products and Potential Entrants

3.5 Mergers & Acquisitions, Expansion

4 SUSTAINABLE PLASTIC ADDITIVES FOR MECHANICAL RECYCLING BY REGION

4.1 Sustainable Plastic Additives for Mechanical Recycling Market Size by Region (2021-2026)

4.2 Global Sustainable Plastic Additives for Mechanical Recycling Annual Revenue by Country/Region (2021-2026)

4.3 Americas Sustainable Plastic Additives for Mechanical Recycling Market Size Growth (2021-2026)

4.4 APAC Sustainable Plastic Additives for Mechanical Recycling Market Size Growth (2021-2026)

4.5 Europe Sustainable Plastic Additives for Mechanical Recycling Market Size Growth (2021-2026)

4.6 Middle East & Africa Sustainable Plastic Additives for Mechanical Recycling Market Size Growth (2021-2026)

5 AMERICAS

5.1 Americas Sustainable Plastic Additives for Mechanical Recycling Market Size by Country (2021-2026)

5.2 Americas Sustainable Plastic Additives for Mechanical Recycling Market Size by Type (2021-2026)

5.3 Americas Sustainable Plastic Additives for Mechanical Recycling Market Size by Application (2021-2026)

5.4 United States

5.5 Canada

5.6 Mexico

5.7 Brazil

6 APAC

6.1 APAC Sustainable Plastic Additives for Mechanical Recycling Market Size by Region (2021-2026)

6.2 APAC Sustainable Plastic Additives for Mechanical Recycling Market Size by Type (2021-2026)

6.3 APAC Sustainable Plastic Additives for Mechanical Recycling Market Size by Application (2021-2026)

6.4 China

6.5 Japan

6.6 South Korea

6.7 Southeast Asia

6.8 India

6.9 Australia

7 EUROPE

7.1 Europe Sustainable Plastic Additives for Mechanical Recycling Market Size by Country (2021-2026)

7.2 Europe Sustainable Plastic Additives for Mechanical Recycling Market Size by Type (2021-2026)

7.3 Europe Sustainable Plastic Additives for Mechanical Recycling Market Size by Application (2021-2026)

7.4 Germany

7.5 France

7.6 UK

7.7 Italy

7.8 Russia

8 MIDDLE EAST & AFRICA

8.1 Middle East & Africa Sustainable Plastic Additives for Mechanical Recycling by Region (2021-2026)

8.2 Middle East & Africa Sustainable Plastic Additives for Mechanical Recycling Market Size by Type (2021-2026)

8.3 Middle East & Africa Sustainable Plastic Additives for Mechanical Recycling Market Size by Application (2021-2026)

8.4 Egypt

8.5 South Africa

8.6 Israel

8.7 Turkey

8.8 GCC Countries

9 MARKET DRIVERS, CHALLENGES AND TRENDS

9.1 Market Drivers & Growth Opportunities

9.2 Market Challenges & Risks

9.3 Industry Trends

10 GLOBAL SUSTAINABLE PLASTIC ADDITIVES FOR MECHANICAL RECYCLING MARKET FORECAST

10.1 Global Sustainable Plastic Additives for Mechanical Recycling Forecast by Region (2027-2032)

10.1.1 Global Sustainable Plastic Additives for Mechanical Recycling Forecast by Region (2027-2032)

10.1.2 Americas Sustainable Plastic Additives for Mechanical Recycling Forecast

10.1.3 APAC Sustainable Plastic Additives for Mechanical Recycling Forecast

10.1.4 Europe Sustainable Plastic Additives for Mechanical Recycling Forecast

10.1.5 Middle East & Africa Sustainable Plastic Additives for Mechanical Recycling Forecast

10.2 Americas Sustainable Plastic Additives for Mechanical Recycling Forecast by Country (2027-2032)

10.2.1 United States Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.2.2 Canada Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.2.3 Mexico Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.2.4 Brazil Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.3 APAC Sustainable Plastic Additives for Mechanical Recycling Forecast by Region (2027-2032)

10.3.1 China Sustainable Plastic Additives for Mechanical Recycling Market Forecast

10.3.2 Japan Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.3.3 Korea Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.3.4 Southeast Asia Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.3.5 India Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.3.6 Australia Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.4 Europe Sustainable Plastic Additives for Mechanical Recycling Forecast by

Country (2027-2032)

10.4.1 Germany Market Sustainable Plastic Additives for Mechanical Recycling

Forecast

10.4.2 France Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.4.3 UK Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.4.4 Italy Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.4.5 Russia Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.5 Middle East & Africa Sustainable Plastic Additives for Mechanical Recycling

Forecast by Region (2027-2032)

10.5.1 Egypt Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.5.2 South Africa Market Sustainable Plastic Additives for Mechanical Recycling

Forecast

10.5.3 Israel Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.5.4 Turkey Market Sustainable Plastic Additives for Mechanical Recycling Forecast

10.6 Global Sustainable Plastic Additives for Mechanical Recycling Forecast by Type (2027-2032)

10.7 Global Sustainable Plastic Additives for Mechanical Recycling Forecast by Application (2027-2032)

10.7.1 GCC Countries Market Sustainable Plastic Additives for Mechanical Recycling Forecast

11 KEY PLAYERS ANALYSIS

11.1 BASF SE

11.1.1 BASF SE Company Information

11.1.2 BASF SE Sustainable Plastic Additives for Mechanical Recycling Product Offered

11.1.3 BASF SE Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)

11.1.4 BASF SE Main Business Overview

11.1.5 BASF SE Latest Developments

11.2 Avient Corporation

11.2.1 Avient Corporation Company Information

11.2.2 Avient Corporation Sustainable Plastic Additives for Mechanical Recycling Product Offered

11.2.3 Avient Corporation Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)

11.2.4 Avient Corporation Main Business Overview

11.2.5 Avient Corporation Latest Developments

11.3 Evonik Industries AG

11.3.1 Evonik Industries AG Company Information

11.3.2 Evonik Industries AG Sustainable Plastic Additives for Mechanical Recycling Product Offered

11.3.3 Evonik Industries AG Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)

11.3.4 Evonik Industries AG Main Business Overview

11.3.5 Evonik Industries AG Latest Developments

11.4 SI Group, Inc.

11.4.1 SI Group, Inc. Company Information

11.4.2 SI Group, Inc. Sustainable Plastic Additives for Mechanical Recycling Product Offered

11.4.3 SI Group, Inc. Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)

11.4.4 SI Group, Inc. Main Business Overview

11.4.5 SI Group, Inc. Latest Developments

11.5 SONGWON Industrial Co., Ltd.

11.5.1 SONGWON Industrial Co., Ltd. Company Information

11.5.2 SONGWON Industrial Co., Ltd. Sustainable Plastic Additives for Mechanical Recycling Product Offered

11.5.3 SONGWON Industrial Co., Ltd. Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)

11.5.4 SONGWON Industrial Co., Ltd. Main Business Overview

11.5.5 SONGWON Industrial Co., Ltd. Latest Developments

11.6 Clariant International Ltd

11.6.1 Clariant International Ltd Company Information

11.6.2 Clariant International Ltd Sustainable Plastic Additives for Mechanical Recycling Product Offered

11.6.3 Clariant International Ltd Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)

11.6.4 Clariant International Ltd Main Business Overview

11.6.5 Clariant International Ltd Latest Developments

11.7 Milliken & Company

11.7.1 Milliken & Company Company Information

11.7.2 Milliken & Company Sustainable Plastic Additives for Mechanical Recycling Product Offered

11.7.3 Milliken & Company Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)

11.7.4 Milliken & Company Main Business Overview

- 11.7.5 Milliken & Company Latest Developments
- 11.8 Kraton Corporation
 - 11.8.1 Kraton Corporation Company Information
 - 11.8.2 Kraton Corporation Sustainable Plastic Additives for Mechanical Recycling Product Offered
 - 11.8.3 Kraton Corporation Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)
 - 11.8.4 Kraton Corporation Main Business Overview
 - 11.8.5 Kraton Corporation Latest Developments
- 11.9 Dow Inc.
 - 11.9.1 Dow Inc. Company Information
 - 11.9.2 Dow Inc. Sustainable Plastic Additives for Mechanical Recycling Product Offered
 - 11.9.3 Dow Inc. Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)
 - 11.9.4 Dow Inc. Main Business Overview
 - 11.9.5 Dow Inc. Latest Developments
- 11.10 ADEKA CORPORATION
 - 11.10.1 ADEKA CORPORATION Company Information
 - 11.10.2 ADEKA CORPORATION Sustainable Plastic Additives for Mechanical Recycling Product Offered
 - 11.10.3 ADEKA CORPORATION Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)
 - 11.10.4 ADEKA CORPORATION Main Business Overview
 - 11.10.5 ADEKA CORPORATION Latest Developments
- 11.11 BYK-Chemie GmbH
 - 11.11.1 BYK-Chemie GmbH Company Information
 - 11.11.2 BYK-Chemie GmbH Sustainable Plastic Additives for Mechanical Recycling Product Offered

 - 11.13.1 Arkema Company Information
 - 11.13.2 Arkema Sustainable Plastic Additives for Mechanical Recycling Product Offered
 - 11.13.3 Arkema Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)
 - 11.13.4 Arkema Main Business Overview
 - 11.13.5 Arkema Latest Developments
- 11.14 Sukano AG
 - 11.14.1 Sukano AG Company Information
 - 11.14.2 Sukano AG Sustainable Plastic Additives for Mechanical Recycling Product Offered
 - 11.14.3 Sukano AG Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)
 - 11.14.4 Sukano AG Main Business Overview
 - 11.14.5 Sukano AG Latest Developments
- 11.15 Tosaf Compounds Ltd.
 - 11.15.1 Tosaf Compounds Ltd. Company Information
 - 11.15.2 Tosaf Compounds Ltd. Sustainable Plastic Additives for Mechanical Recycling Product Offered
 - 11.15.3 Tosaf Compounds Ltd. Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)
 - 11.15.4 Tosaf Compounds Ltd. Main Business Overview
 - 11.15.5 Tosaf Compounds Ltd. Latest Developments
- 11.16 Rianlon Corporation
 - 11.16.1 Rianlon Corporation Company Information
 - 11.16.2 Rianlon Corporation Sustainable Plastic Additives for Mechanical Recycling Product Offered
 - 11.16.3 Rianlon Corporation Sustainable Plastic Additives for Mechanical Recycling Revenue, Gross Margin and Market Share (2021-2026)
 - 11.16.4 Rianlon Corporation Main Business Overview
 - 11.16.5 Rianlon Corporation Latest Developments
- 11.17 The Compound Company B.V.
 - 11.17.1 The Compound Company B.V. Company Information
 - 11.17.2 The Compound Company B.V. Sustainable Plastic Additives for Mechanical Recycling Product Offered
 - 11.17.3 The Compound Company B.V. Sustainable Plastic Additives for Mechanical

Recycling Revenue, Gross Margin and Market Share (2021-2026)

11.17.4 The Compound Company B.V. Main Business Overview

11.17.5 The Compound Company B.V. Latest Developments

11.18 Cargill, Incorporated

11.18.1 Cargill, Incorporated Company Information

11.18.2 Cargill, Incorporated Sustainable Plastic Additives for Mechanical Recycling
Product Offered

11.18.3 Cargill, Incorporated Sustainable Plastic Additives for Mechanical Recycling
Revenue, Gross Margin and Market Share (2021-2026)

11.18.4 Cargill, Incorporated Main Business Overview

11.18.5 Cargill, Incorporated Latest Developments

12 RESEARCH FINDINGS AND CONCLUSION
