Food is a huge part of our daily lives. However, in many cases, the way we produce it contributes to the environment's decline. One of the most significant impacts of food products are greenhouse gas emissions, and the use of energy. While there are more eco-friendly options, there is no perfect food, and it more often than not leaves behind a carbon footprint. At every meal, we are faced with the decision of catering either to the environment or our taste buds. These two goals need not be mutually exclusive. One way to be green is by finding different alternatives to meet our daily protein needs.
