## Abstracts

The global Suvorexant API market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Suvorexant, sold under the brand name Belsomra, is an orexin antagonist drug used to treat insomnia. It is specifically designed to treat insomnia characterized by difficulty falling or staying asleep in adults, helping to fall asleep faster, stay asleep longer, wake up less often in the middle of the night, and achieve better quality sleep.

The Suvorexant API industry chain consists of upstream fine chemicals and key pharmaceutical intermediates, midstream API synthesis and crystal form control, and downstream formulation companies and end-user applications. Downstream demand is concentrated in formulation companies producing novel mechanism drugs for insomnia and large prescription drug retailers. These companies leverage their clinical, brand, and channel advantages to promote the use of Suvorexant formulations in hospitals and specialized sleep medicine institutions. Within the downstream structure, the growth rate of demand from formulation companies far exceeds that of upstream capacity expansion, making it the core driving force for industry scale expansion. Simultaneously, hospital systems, internet healthcare, and chain pharmacies have improved prescription accessibility, resulting in a stable upward trend in API demand.

The development trend of Suvorexant API is driven by the increasing global demand for insomnia treatment, the substitution of non-benzodiazepine drugs, policy support for low-dependency drugs, and the continued recognition of innovative mechanisms. With the increasing specialization of sleep medicine and patients' growing concern for safety, dual orexin receptor antagonist products maintain rapid growth in many countries. Downstream formulation companies' continuous expansion of indications and accelerated international registration will further increase their procurement of APIs. Obstacles remain, including complex active pharmaceutical ingredient (API) synthesis

routes, high costs, relatively concentrated supply of core intermediates, difficulty in controlling crystal form consistency, long market entry cycles in some markets, and slow shifts in physician prescribing habits. Awareness of these drugs in emerging markets such as Southeast Asia and the Middle East also needs improvement, resulting in uneven regional penetration.

In 2024, the production volume of Suvorexant API was 448 kg, with an average price of US\$22,400/kg and a gross profit margin typically ranging from 45% to 60%.
