In 2024, global sweet pepper harvesting robots for commercial Greenhouse production reached 156 units, with an average global market price of around US\$ 32,000 per unit. The sweet pepper harvesting robot is a robot specially designed to automatically pick ripe sweet peppers in an agricultural environment. The Sweet Pepper Harvesting Robot combines advanced sensor technology, machine vision, automated control, and robotic arms to autonomously move around the pepper planting area, identify ripe peppers, and pick them. This robot is designed to improve the efficiency of sweet pepper picking, reduce labor costs, and adapt to the needs of modern agriculture for automation and intelligence. This report mainly focuses on sweet pepper harvesting robots for commercial greenhouse market.

With the continuous advancement of cutting-edge technologies such as sensor technology, artificial intelligence (AI), and machine vision, the research and development and application of commercial greenhouse sweet pepper harvesting robots are gradually maturing. These technological innovations have significantly improved the robots' operational performance and environmental adaptability, making them increasingly important in meeting modern agriculture's demand for efficient, precise, and intelligent production. Against the backdrop of an aging global population and a declining agricultural labor force, commercial greenhouse sweet pepper harvesting robots, as a key component of intelligent agricultural equipment, can not only effectively alleviate labor shortages but also improve harvesting efficiency, reduce labor intensity, and promote agricultural modernization. Governments around the world have

also introduced policies to support agricultural technological innovation and the development of intelligent equipment, creating a favorable policy environment for the promotion of commercial greenhouse sweet pepper harvesting robots. However, the promotion of commercial greenhouse sweet pepper harvesting robots still faces many challenges, including high R&D and manufacturing costs that impose an economic burden on small farmers, complex and diverse agricultural environments that place higher demands on robot navigation and operation capabilities, significant differences in agricultural needs across different regions that require customized equipment design, and a currently inadequate maintenance and service system. In the future, continuous technological innovation and service system construction are needed to promote the wider application of commercial greenhouse bell pepper harvesting robots in diversified agricultural scenarios around the world.
