The global Sweet Potato Starch market size is predicted to grow from US\$ 706 million in 2025 to US\$ 1040 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Sweet potato starch is a granular or powder-like product obtained by washing, crushing, multi-stage cyclone refining, dehydration, and drying of sweet potatoes. The core of its upstream industrial chain is the large-scale cultivation of starch-specific high-yield sweet potatoes, as well as the processing equipment line consisting of grinding machines, vacuum dehydrators, and air-flow drying systems; the downstream precisely connects with the processing of vermicelli and noodles, seasoned meat products, Chinese pastries batter, infant supplementary foods, and high-value modified starch fields. In 2025, the global sweet potato starch market segment's production capacity was 102.5 million tons. The actual total global sales volume reached 736,800 tons that year. The global market average price remained at around \$980 per ton, and the average net profit rate of this market segment remained at 11.8%.

In the future, the sweet potato starch industry will evolve towards fully enclosed automated production, high substitution degree of modification and transformation, as well as full component cascading utilization, aiming to solve the technical problems of raw material oxidation blackening and incomplete protein separation. The core driving force of the market comes from consumers' obsessive pursuit of clean labels. As a non-genetically modified, natural and healthy carbon source, sweet potato starch is replacing tapioca and corn starch on a large scale in high-end hot pot condiments and healthy low-fat puffed foods. Moreover, with the maturity of cold chain technology, 'freeze-resistant and shear-resistant' modified sweet potato starch developed for frozen prepared foods has become a new driving force for the high premium growth of this sub-industry.
